

2. Determine the entities needed for your project. Determine the attributes and relationships.

USER - entity

Creates - relationship

User Id - attribute

User First Name - attribute

User Last Name - attribute

Is Created By - relationship

NOTE - entity

Note Id - attribute

Note date - attribute

3. Create business rules for each of your relationships. Remember, there should be two business rules for each relationship; one for each direction from one entity to the other.

Business Rule 1: A USER may create any number of NOTE

<USER><may><Create><any number><NOTE>

Business Rule 2: Each NOTE must be created by exactly one User

<NOTE><must><Created><one><USER>
